

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

ServiceNow Micro-Project

PHASE 8 | PROJECT DEMONSTRATION PHASE

8. Project Demonstration Phase

This phase provides a structured walkthrough for presenting the completed automation to reviewers or stakeholders, tying every configuration step back to a visible, verifiable output screen.

8.1 Demonstration Agenda

#	Segment	Duration
1	Problem statement & objective recap	2 min
2	Walkthrough of the Flow (trigger + action + field mapping)	4 min
3	Walkthrough of the Process Engine binding on the catalog item	2 min
4	Live demo: place order → approve → verify Catalog Task	6 min
5	Q&A	3 min

8.2 Demo Script — Step by Step

1. **Set the context:** "Standard Laptop orders currently need someone to manually create and assign a configuration task after approval — this project automates that step entirely."
2. **Show the Flow:** Open Flow Designer → "Standard Laptop task" → show the Service Catalog trigger and the Create Catalog Task action with its field mapping.
3. **Show the binding:** Open Maintain Items → Standard Laptop → Process Engine tab → show Flow = "Standard Laptop task".
4. **Place a live order:** Service Catalog → Hardware → Standard Laptop → Order Now → show the generated Request Number.
5. **Approve the request:** Open the Request → Approvers related list → right-click → Approve.
6. **Verify the result:** Open the Requested Item → Catalog Tasks related list → open the new task and show every field was auto-filled correctly.
7. **Close with the outcome statement** (Section 8.5).

8.3 Key Output Screens Presented During the Demo
